

# “SCIENCE ENTHUSIASTS” METHOD

Formulate or plagiarize  
a hypothesis

Construct a model based  
on preconceived ideas

Find data that  
agrees with the model

Discard data that does not  
agree with the model

Scream as loud as you can  
“TRUST THE EXPERTS!”

## SCIENTIFIC METHOD

INTERNATIONAL ZINE MONTH  
JULY 2024

Troubleshoot  
the procedure,  
check the steps  
and setup.

Use the data as  
a background  
research for new  
questions and  
new hypotheses,  
experiment  
again.

So, if you come across an interesting topic, phenomenon, or experiment description on the internet, start by finding that information in another place. Check where these sources got their information from—if they all stem from a single source, it could be problematic.

Always try to reach different sources, different analyses, and different studies, but it is not true that “the truth lies in the middle.” Some opinions and viewpoints are simply wrong, and centrism, thinking that both flat-earthers and globe supporters are right, is foolish.

And if some information fits very well with your views, you must check it especially carefully to avoid the “confirmation bias” seen in the diagram of fanatics.
